

Condition Based Monitoring *Infrared Thermography (IRT)*

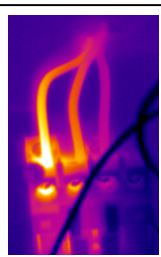

Decrease production costs and unplanned downtime with predictive technology

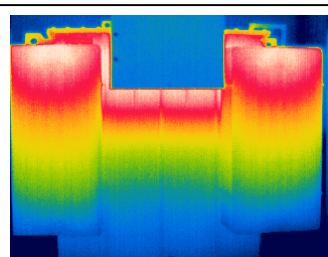

"IRT offers real-time, fast response, non-contact temperature measurement of large or small target areas and accurately locate problems prior to failure. Nearly everything that uses or transmits power gets hot before it fails, IRT is a cost effective way to manage and maintain the reliability of your electrical, mechanical and process systems. At Anstee Ware our equipment includes the Flir ThermoCAM P25 with the Flir Professional Software for analysis and reporting"

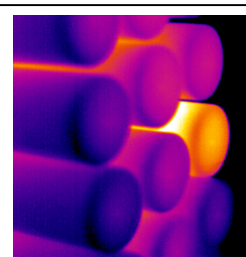

Fuse

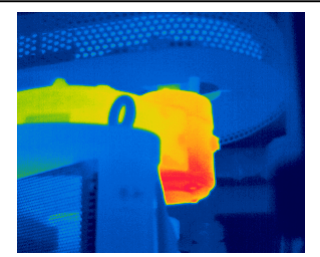

Contactor

Transformer

Capacitors

Mechanical

"Our competent engineers are accredited and trained CM personnel to Level 1 and Level 2 Infrared Thermography based on the PCN Certification Scheme ISO 18436 and the American ASNT SNT-TC-1A standard"

Infrared image analysis provides the means of diagnosing problems and anomalies in a wide range of applications including

- Buildings
- Electrical Surveys
- Energy Conservation
- Mechanical Plant
- Process Plant
- Composite
